AIE CODE SUMMIT HACKATHON · CAPABILITIES

# ClauseLens

Evidence-first contract review that checks every MSA and NDA against your playbook, and gets better with every correction.

[Team name] · [Presenter]

Gemini 4 Argon · Gemini 3.8 Flash

THE PROBLEM

# Contracts hide their risk in plain sight

## Review is slow and manual

Lawyers read every MSA line by line to find the handful of terms that matter.

## Reviewed once, then forgotten

Renewal deadlines, uncapped liabilities and exit rights go unseen until they hurt.

## Generic AI isn’t trusted

Summaries without evidence, judged against no one’s policy, can’t be signed off.

THE PROMISE

# Upload a contract. Every risky clause comes back with its exact evidence, checked against your playbook, ready to accept or reject.

### Evidence you can verify

Every finding links to the sentence and page it came from.

### Your policy, not AI opinion

Flags are deviations from your own playbook positions.

### Gets better, provably

Corrections ship only if they win on held-out contracts.

HOW IT WORKS

# Five steps, one loop

01

## Read

Pages transcribed in parallel, page numbers kept

`3.8 Flash`

02

## Extract

Clause facts with verbatim quotes and section

`4 Argon`

03

## Check

Playbook rules in code assign each tier

`No model`

04

## Review

A lawyer accepts, rejects or edits each flag

`Human`

05

## Learn

Corrections become versioned, tested changes

`Held-out gate`

Adopted changes improve the next Extract and Check; failed ones roll back.

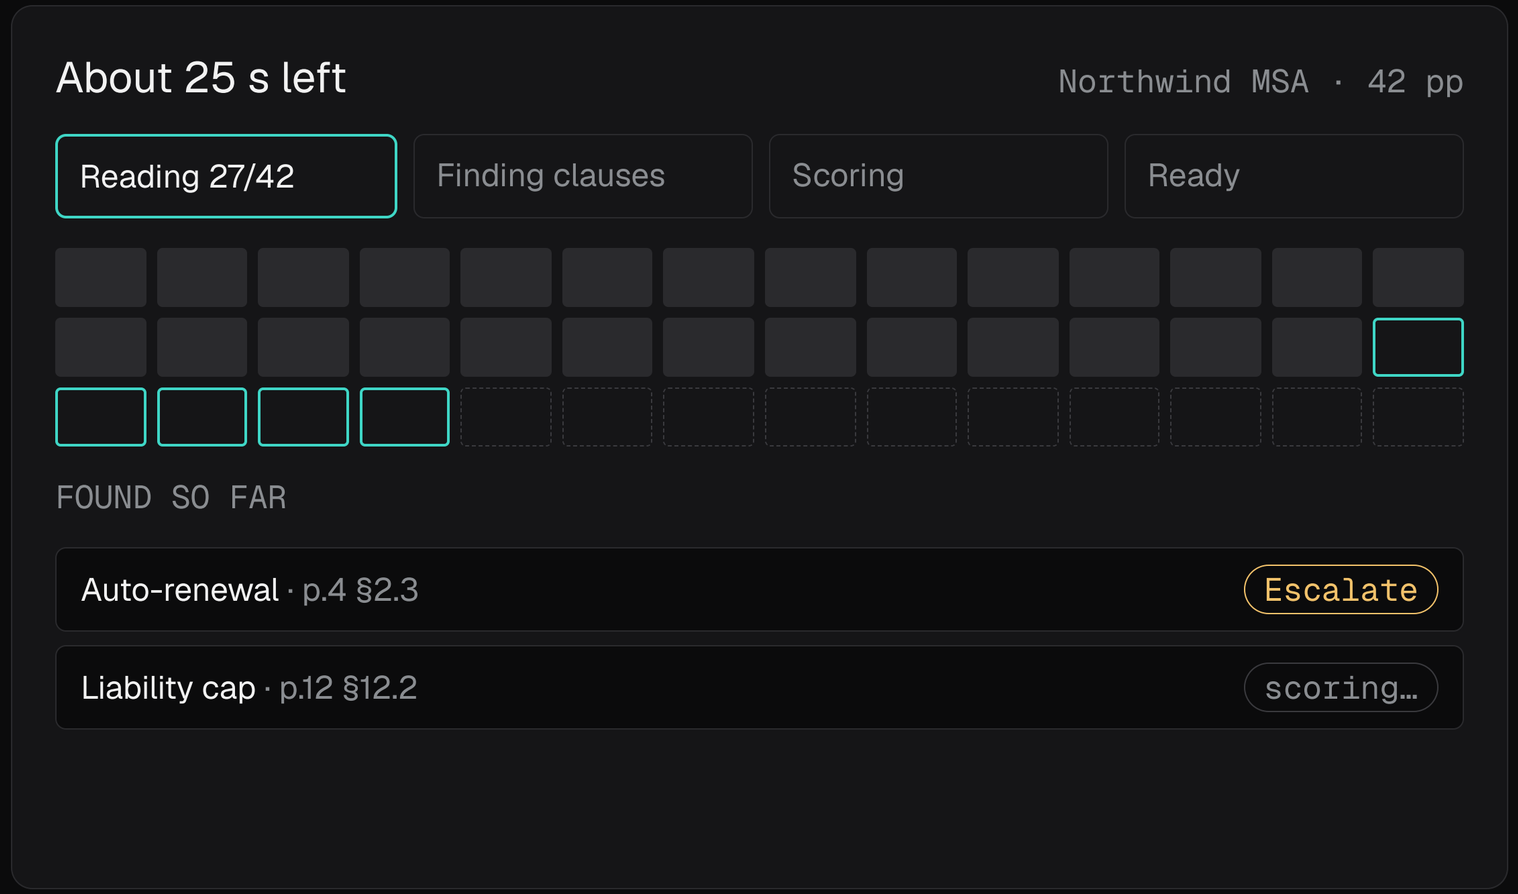

CAPABILITY 1 · LIVE PROCESSING

# See the work happen, not a spinner

Reviewers start reading in seconds while the rest of the contract is processed.

- Real stages with an honest time estimate
- Pages fill in as they are transcribed, 5 at a time in parallel
- Clauses appear the moment they are found

Value: no dead time · trust through visibility

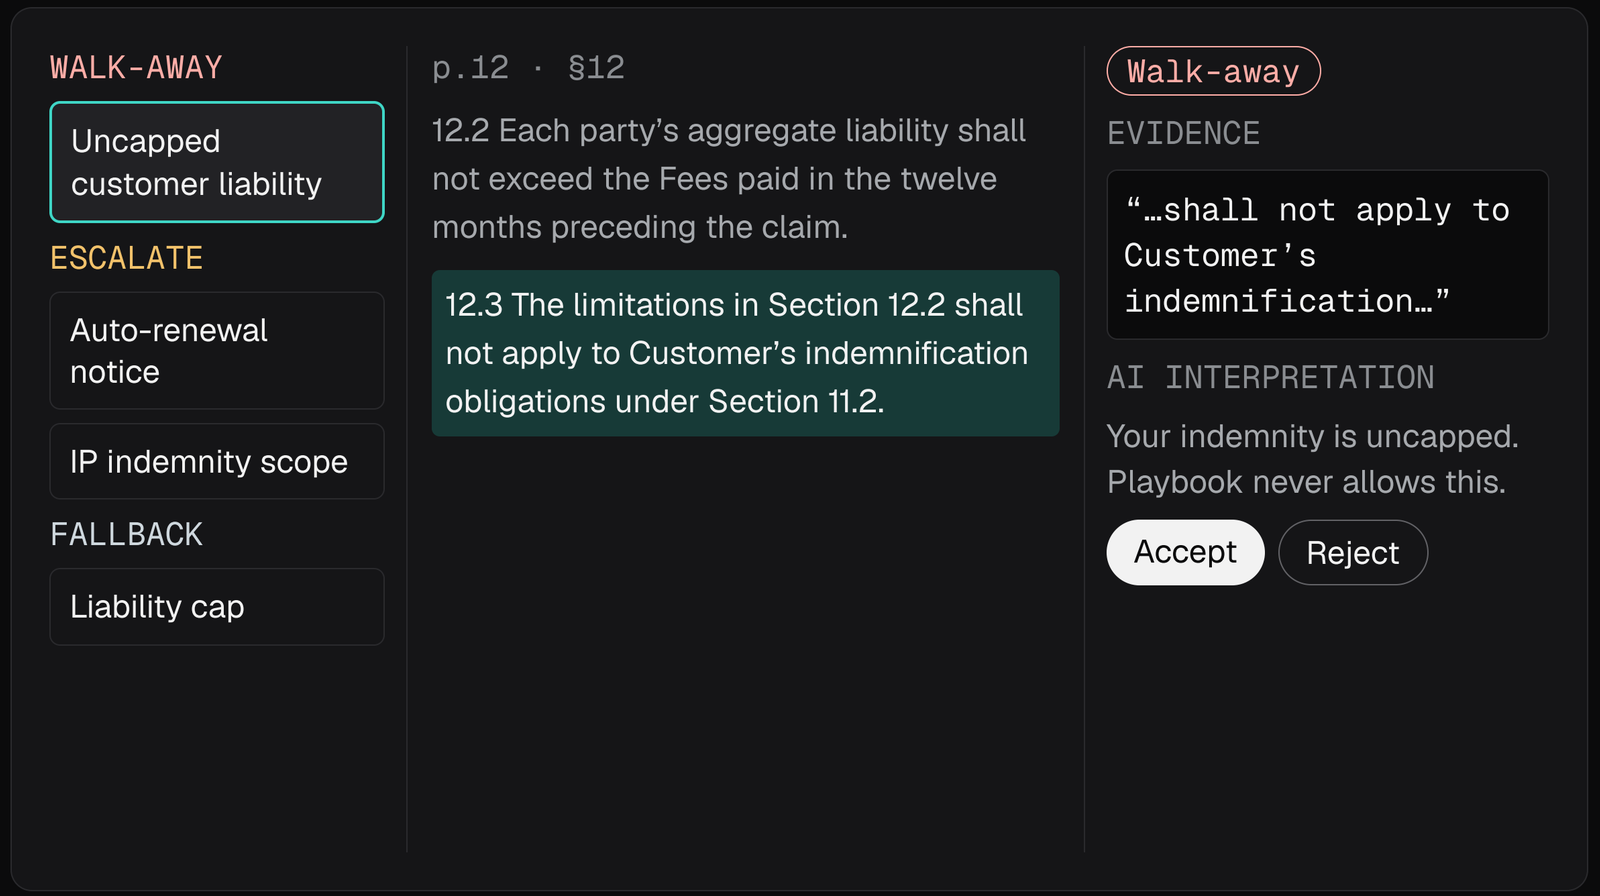

CAPABILITY 2 · REVIEW DESK

# Every flag shows its evidence

What the contract says is kept apart from what the AI thinks.

- Flags grouped by playbook tier
- One click jumps to the exact sentence
- Accept, reject or edit from the keyboard
- Bulk accept low-risk tiers, with undo

Value: verify in seconds · defensible sign-off

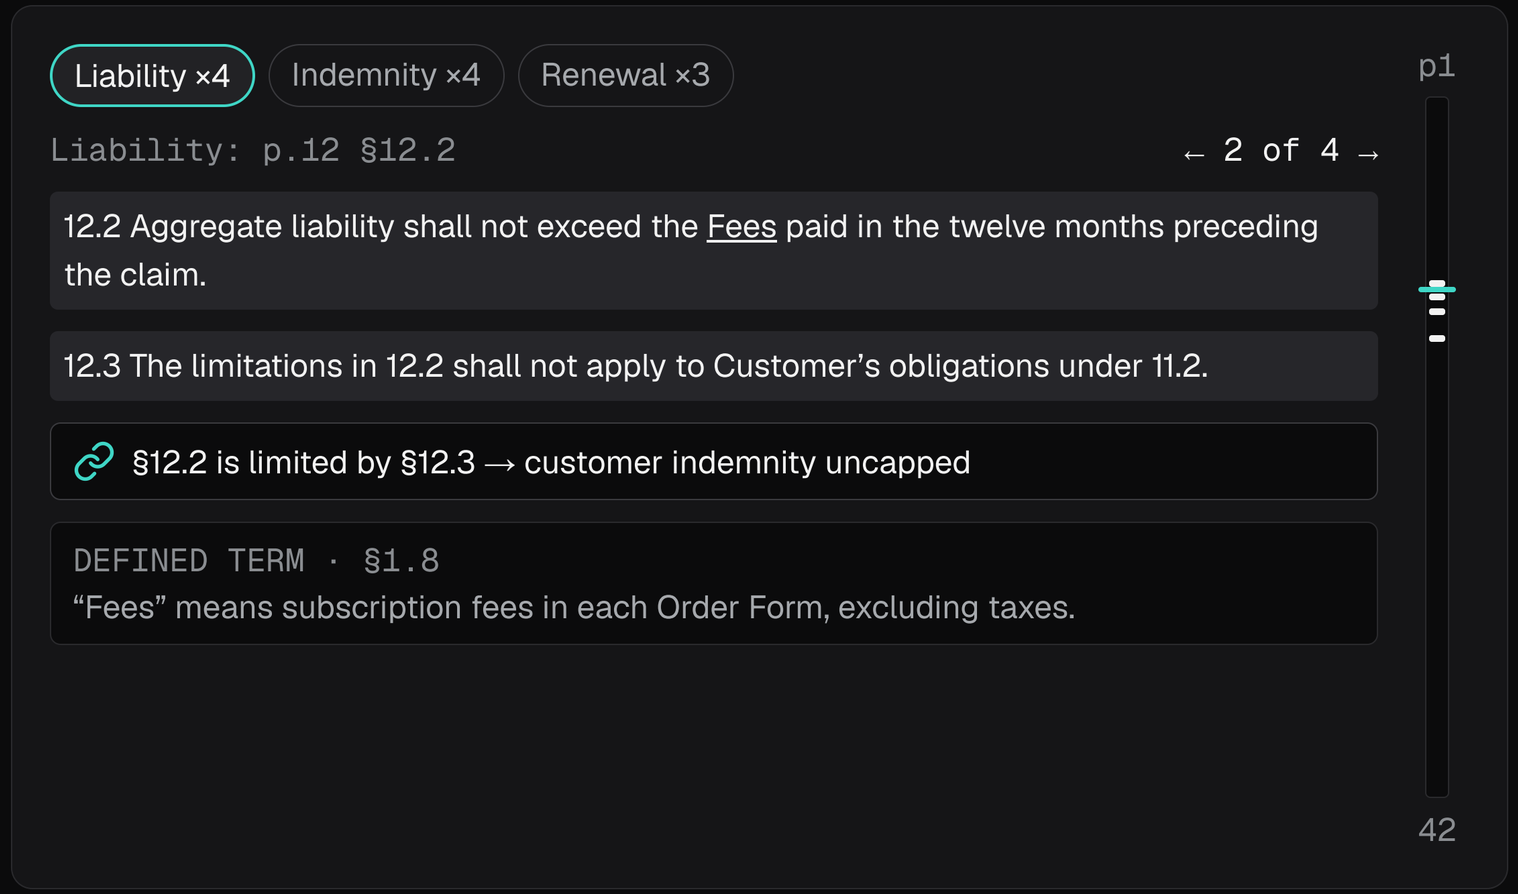

CAPABILITY 3 · TAGS AND LINKED CLAUSES

# Follow a topic through the whole contract

Risk hides in cross-references. ClauseLens connects them.

- Click a tag to highlight every instance
- Minimap ticks show where they sit
- “§12.2 is limited by §12.3” links
- Defined terms open their definitions

Value: catch the carve-out that undoes the cap

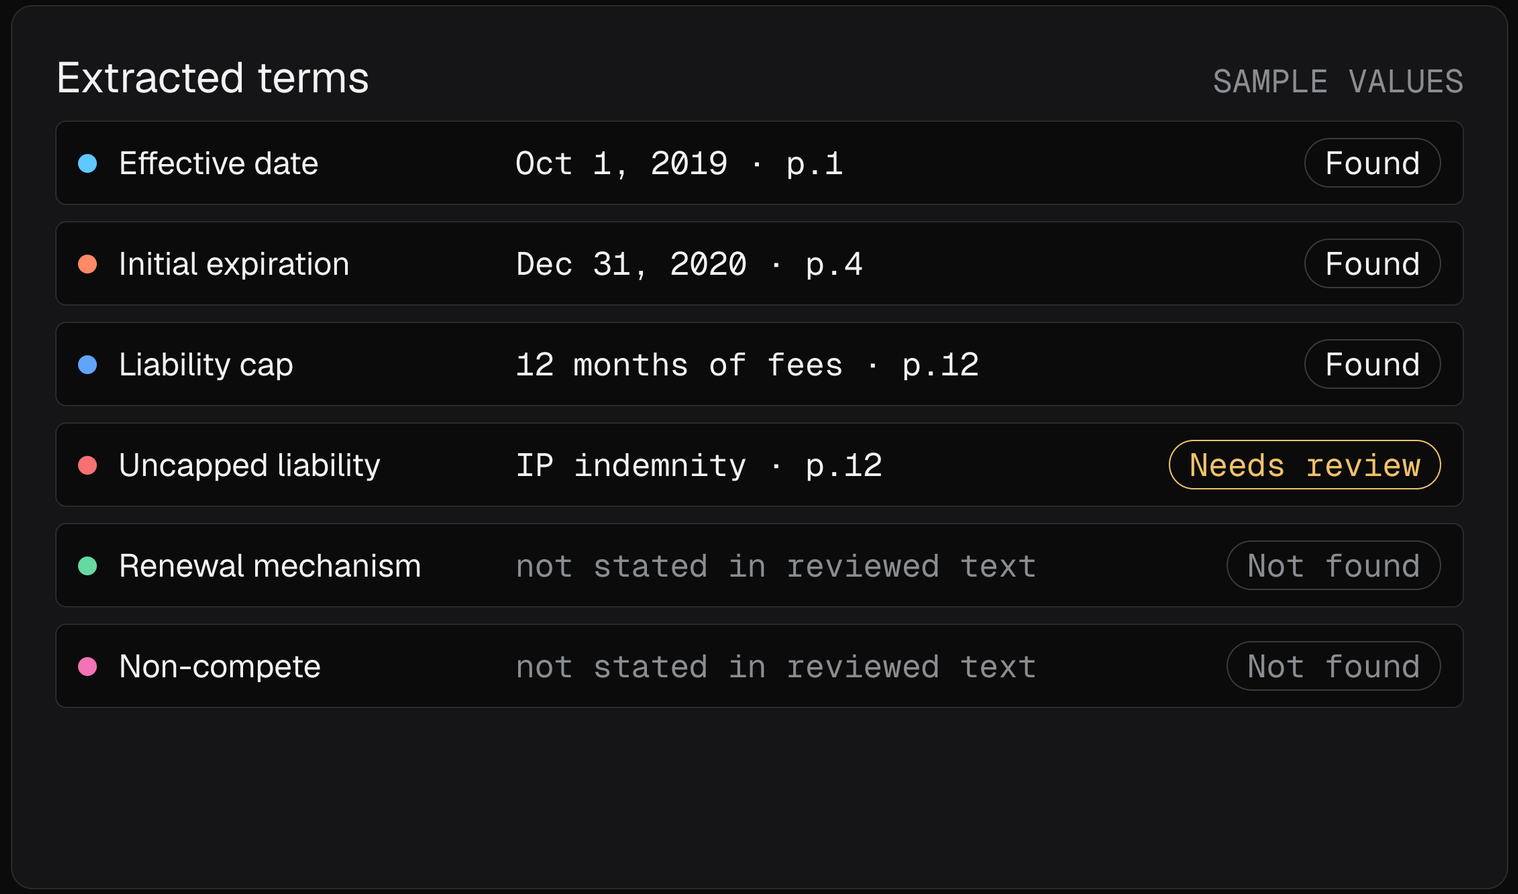

CAPABILITY 4 · STRUCTURED TERM EXTRACTION

# Ten contract terms, as values

Dates, money and periods pulled out as structured values, each with its evidence.

- Effective date, expiration, renewal, notice, termination
- Non-compete, liability cap, uncapped liability, audit, insurance
- Honest outcomes: Found, Not found, Needs review
- “Not found” is never treated as proof of absence

Value: answers, not just highlights

CAPABILITY 5 · THE PLAYBOOK

# Your positions, written down once

Every flag means “this deviates from *our* policy,” not the AI’s general opinion.

- Rules with conditions, customer and vendor side
- Draft, then publish, with version history
- Preview the impact on your real contracts
- Coverage gaps show what no rule covers

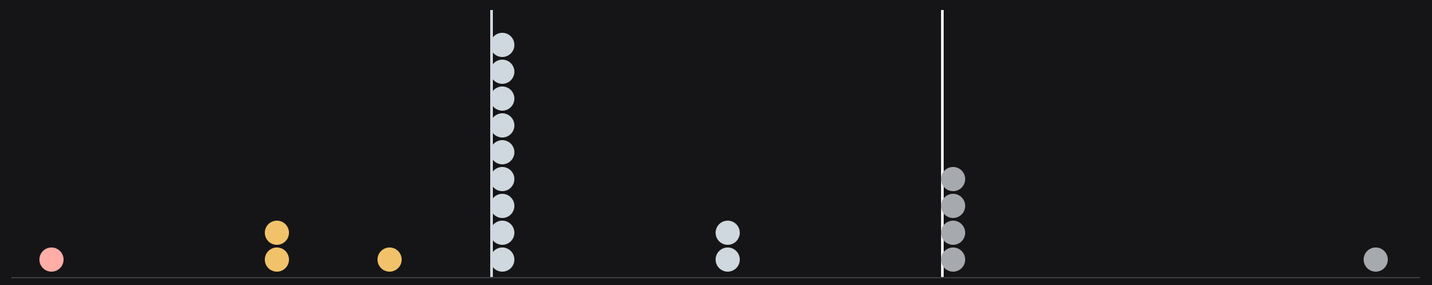

Value: consistent, auditable reviews

## Liability cap

Customer-side MSA · v7

| WALK-AWAY | ESCALATE | FALLBACK | PREFERRED |
|---|---|---|---|
| No cap | < 12 months | 12–23 months | 24+ months |

YOUR LAST 20 CONTRACTS · SAMPLE

1 walk-away · 3 escalate · 11 fallback · 5 preferred. Moving fallback to 18 months would escalate 9 more.

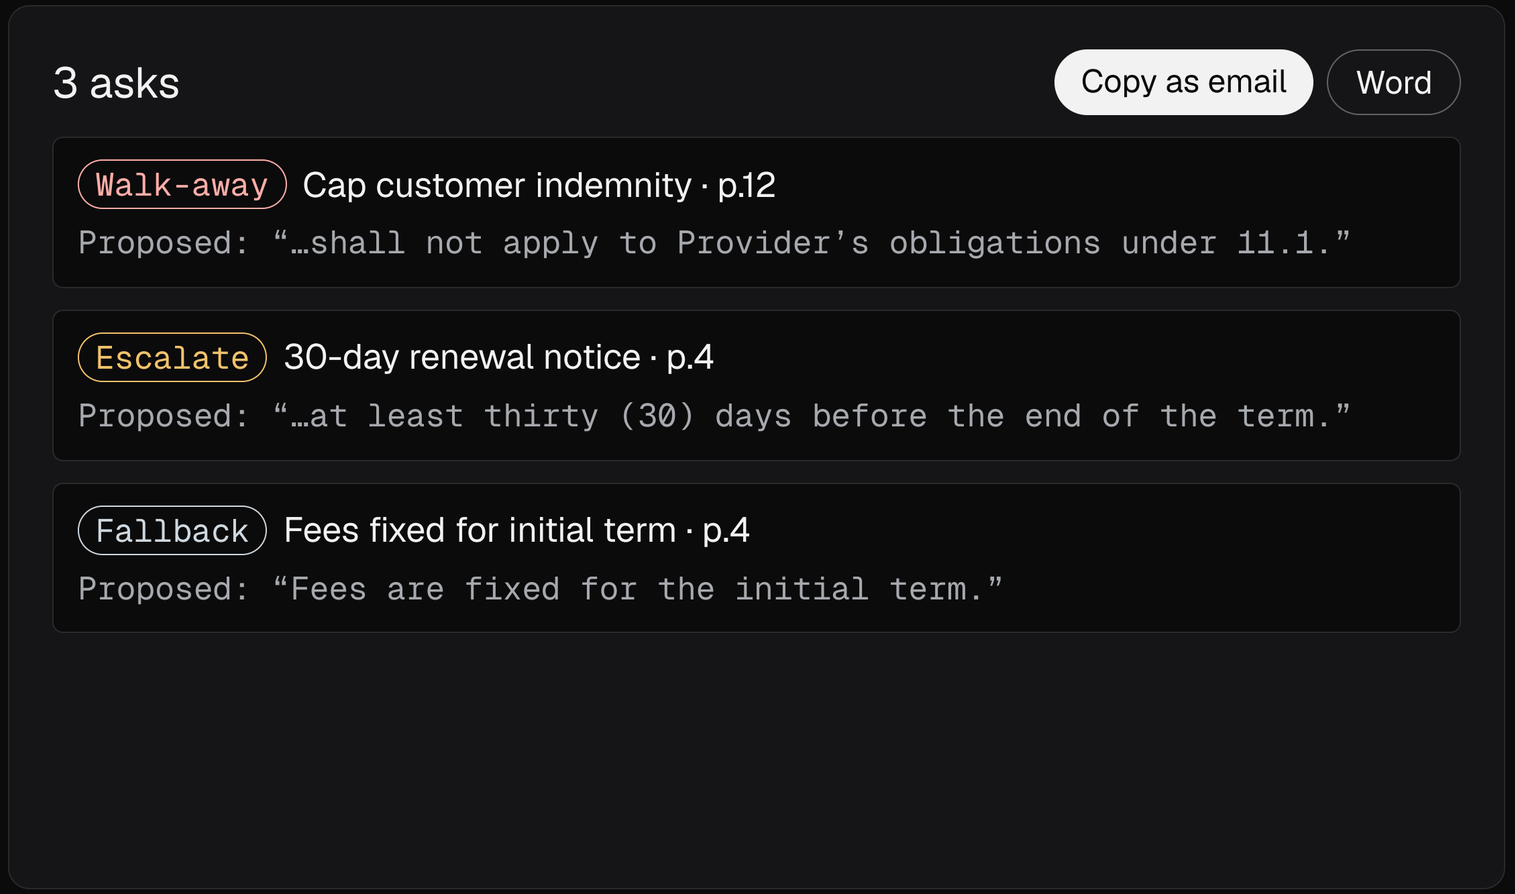

CAPABILITY 6 · NEGOTIATION SUMMARY

# From review to a ready-to-send redline

Every deviation becomes an ask, with your position and fallback wording already written.

- Walk-away, Escalate and Fallback findings, most serious first
- Rejected findings left out; unreviewed ones marked
- Copy as email, Markdown memo or Word
- Bulk accept clears low-risk findings in one click

Value: hours of redlining in minutes

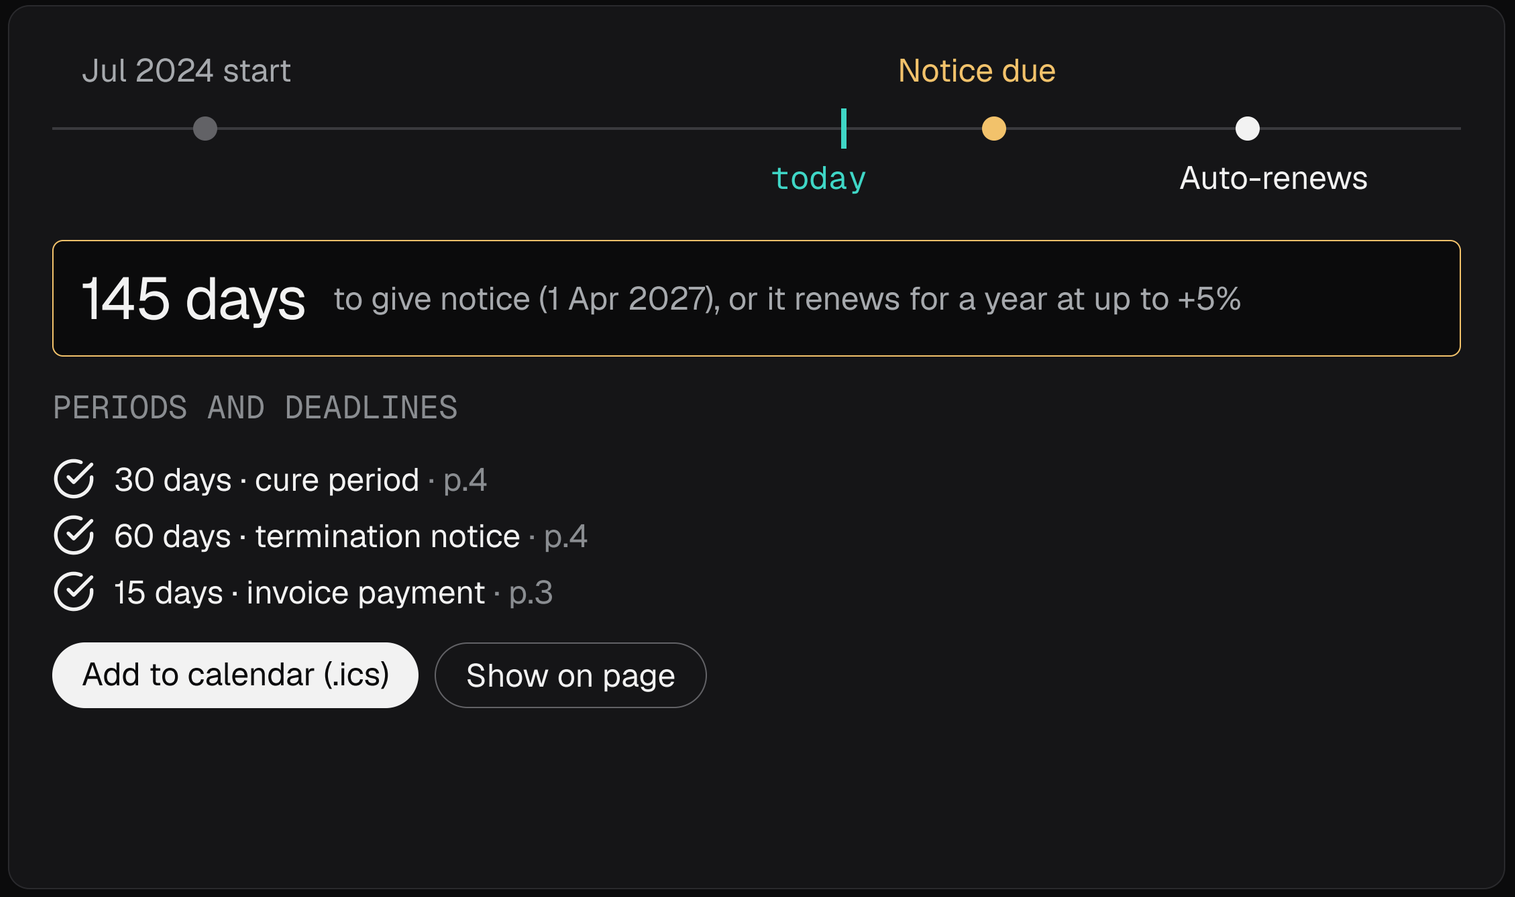

CAPABILITY 7 · KEY DATES

# Never miss a notice deadline

Dates and periods detected from the text, with the deadlines that follow from them.

- Effective, expiration, notice and cure periods
- Term end and notice deadline calculated, formula shown
- Timeline and countdown; every date links to its page
- Upcoming dates to your calendar (.ics)

Value: no missed renewals

CAPABILITY 8 · CONTRACT COMPARISON

# Your terms against theirs, side by side

Compare contracts clause by clause, with the playbook tier on each side.

- Up to six contracts across ten term types
- Two-contract view shows only what differs
- Click a cell to open the evidence

Value: see which deal is riskier at a glance

## Northwind vs Contoso

SAMPLE · differences only

| Term | Northwind MSA | Contoso MSA |
|---|---|---|
| Liability cap | 12 months of fees · Fallback | Uncapped · Walk-away |
| Renewal | Auto, 90-day notice · Escalate | No auto-renewal · Meets |
| Termination | For convenience, 90 days · Meets | Not found |
| Non-compete | Not found | 12 months, US · Walk-away |

Tiers from the published Customer-side MSA playbook.

CAPABILITY 9 · PORTFOLIO (SUPPORTING)

# Every contract, filtered to what needs you

A supporting list, not the product: it routes you back into the review desk.

- Which contracts have Walk-away findings
- Which contain a given clause type
- Where review is unfinished
- One click opens the contract to review

Value: know where risk sits across all deals

Has Walk-away | Clause: liability cap | Unfinished review

| Contract | Most serious | W · E | Reviewed |
|---|---|---|---|
| Contoso MSA | Walk-away | 2 · 5 | 4 of 31 |
| Fabrikam NDA | Walk-away | 1 · 2 | 0 of 12 |
| Northwind MSA | Escalate | 0 · 9 | 45 of 45 |

SAMPLE DATA · filtered: 2 of 3 contracts have Walk-away findings

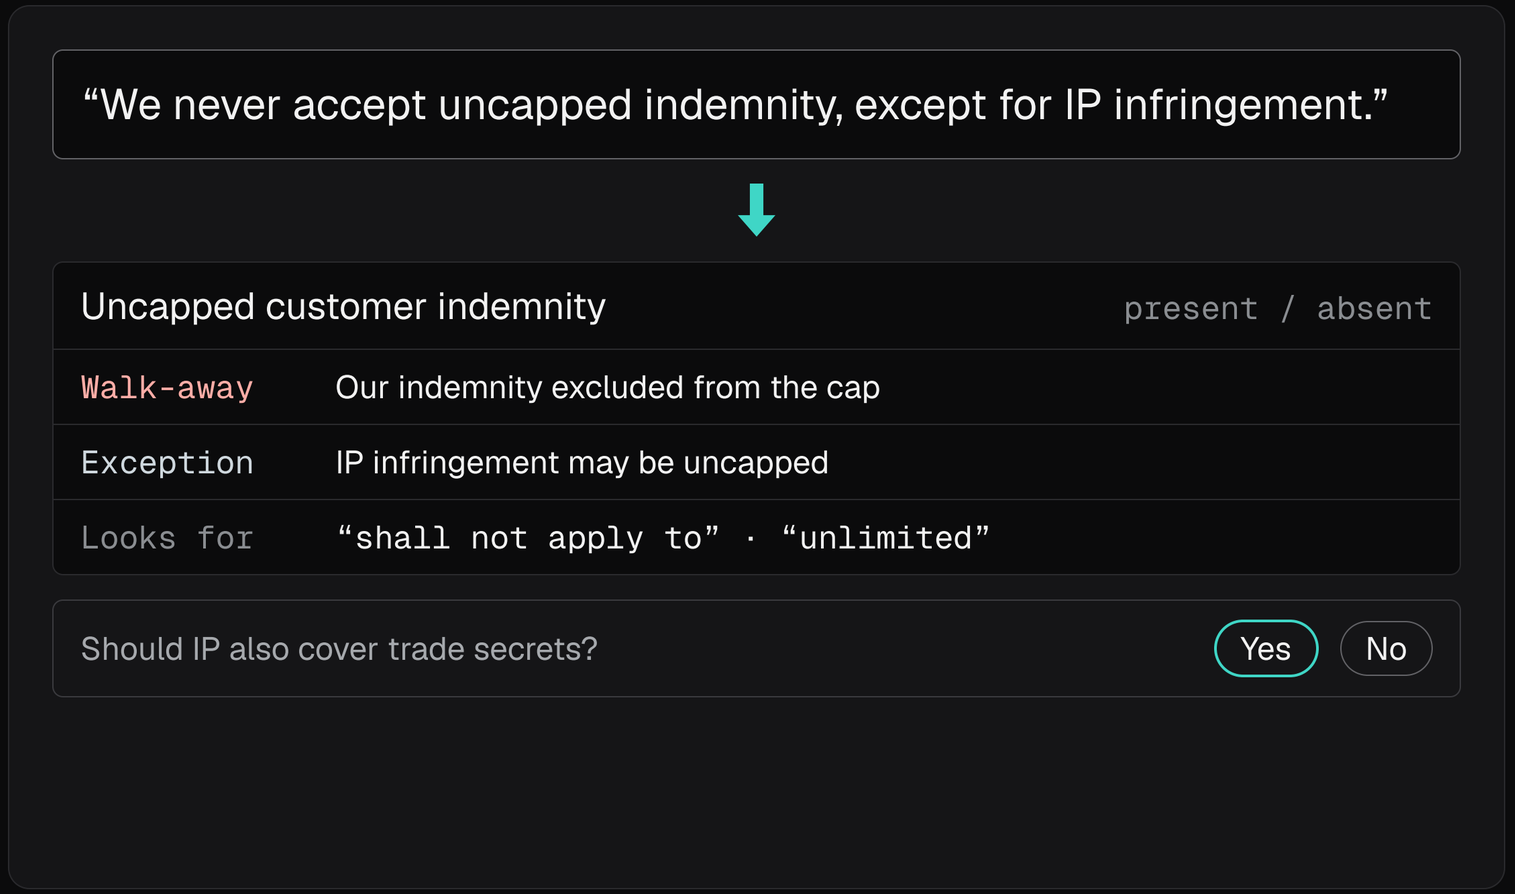

NEXT · RULES IN PLAIN ENGLISH

# Say the policy, get a structured rule

Legal teams build the playbook in minutes, without a form or an engineer.

- Gemini 4 Argon parses tiers, exceptions and phrases
- Asks about anything ambiguous
- Shows which contracts it would flag
- Or draft a playbook from your own template

Next: needs a server-side AI call · designed, not built

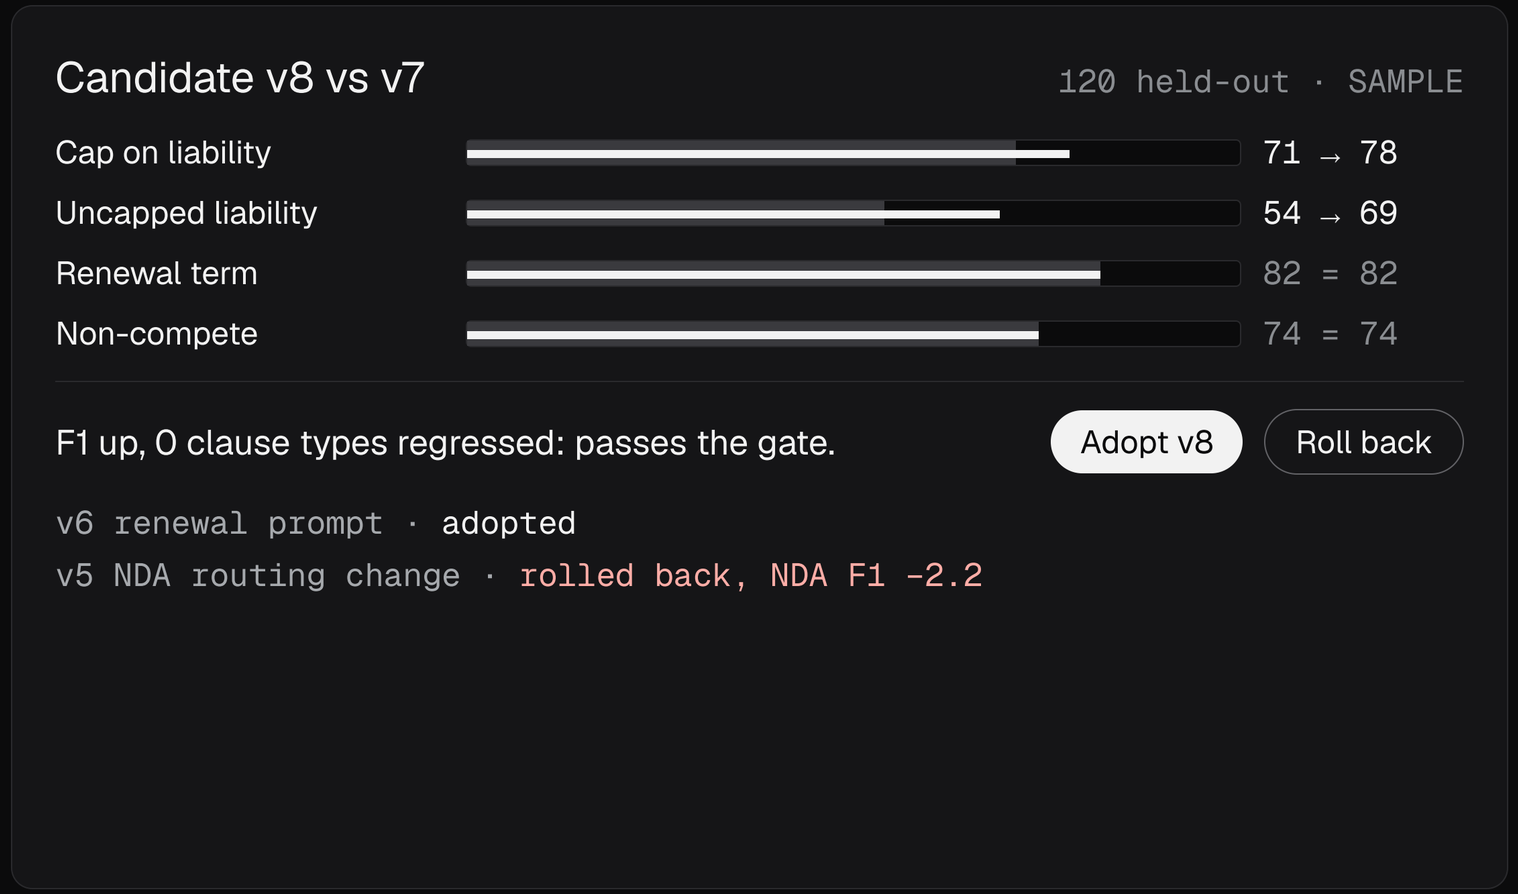

NEXT · THE SYSTEM THAT GETS BETTER

# Every correction is tested before it ships

A rejected flag becomes a versioned change. It goes live only if it wins on held-out contracts.

- Changes to prompts, rules or routing
- Held-out CUAD + ContractNLI never used to tune
- Adopt only if F1 rises and nothing regresses
- Full history; roll back any version

Next: needs backend support · designed, not built

WHY IT IS HARD TO COPY

# More than a few prompts away

## AI reads, rules decide

The model only extracts facts. Code compares them to the playbook, so tiers are reproducible and explainable.

## Evidence is verified

Every quote is checked word for word against the page text before a flag is shown.

## Held-out gate

Changes are adopted only when expert-labeled contracts they never saw confirm them.

## Compounding data

Each customer’s playbooks and corrections become training signal no competitor has.

THE STACK

# Five layers, each model picked for its job

| | |
|---|---|
| EXPERIENCE | React 19 · TypeScript · Vite · **PDF.js** (page render and text layer for evidence highlights) · react-markdown |
| API | ASP.NET Core on **.NET 10** · Entity Framework Core · PostgreSQL 16 · Firebase Auth · OpenAPI contract |
| AGENTS | **BlueShift** worker and Admin · LLM steps: split, page sections, contract extraction · Azure Service Bus · OpenSearch telemetry · MongoDB eval logs |
| MODELS | Azure AI Foundry: **Mistral OCR 4**, GPT-4.1 mini · Google **Gemini 3.8 Flash** · Meta Muse · chosen per step in Admin |
| DATA AND OPS | Docker Compose, 10 services · CUAD, ContractNLI, MAUD, EDGAR benchmarks · playbook rules evaluated in code |

WHAT WE BUILT AT THE HACKATHON

# Clear about what is new

## Existing before the event

- Document intake scaffold
- BlueShift agent framework
- Public datasets: CUAD, ContractNLI

## Built today

- Live processing with real stages
- Review desk, evidence highlighted in yellow
- Tags, linked clauses, defined terms
- Extraction of ten contract terms
- PDF viewer and per-page analysis
- Playbook: rules, tiers, draft → publish
- Negotiation summary with export
- Key dates, countdowns, calendar
- Contract comparison and portfolio
- Bulk accept, slimmer review layout

## Next

- Rules in plain English
- Correction → held-out test → adopt loop
- Value-based rules (cap under 12 months)
- Shared decisions and playbooks

CLAUSELENS

# Your playbook, applied to every contract, with evidence, getting better every week.
